

**AMI announce the release of
AMI Enterprise Intelligence version 3.2**

Cambridge UK, 17th September 2007

New version empowers users with extended data collection capabilities and drives greater collaborative use of acquired information.

AMI Software, a leading developer of software designed specifically for the acquisition and management of textual information today announced the immediate availability of AMI Enterprise Intelligence version 3.2.

Resulting from an investment of more than 20 million euros, and marketed since September 2005, AMI Enterprise Intelligence allows CIO's, Heads of Research, Market and Competitive Intelligence Managers to implement all functions and processes necessary for the Search, Collection, Publishing, Analysis, Distribution and Personalisation of key information from a single point of access.

Maintaining its high level of innovation and meeting on-going user requirements AMI has developed and made available very significant new functionality with version 3.2

- ✓ **Integration of Rules Engine** allowing the automatic identification, classification, user alert and routing of documents supporting real time distribution of key information.
- ✓ **Optimisation of Analysis functions** via additional tools applied to concept extraction and metadata associated with documents.
- ✓ **Transversal document management** between the Publish and Analyze modules allowing further discovery and description of hidden information.
- ✓ **Extraction of the significant parts of a document** via new topological algorithms with storage and retrieval of the content in xhtml allowing the structure and integrity of a document to be fully maintained.
- ✓ **Improvement in Document Validation process** with the addition of a visualisation mode for identifying documents by type allowing immediate processing.

AMI Enterprise Intelligence v3.2 promotes far greater collaborative use of acquired information and the full capitalisation of its value over the medium and longer term via a set of simple to use ergonomically designed interfaces.

Drawing together all these functions under one roof make AMI unique in its ability to deliver all the requirements necessary for implementing any intelligence based project, be it Market, Competitive, Procurement or otherwise.

About AMI Software

AMI Software is a leading developer of information management software specialising in the acquisition, processing and management of textual information and is used by private and public sector organisations of all sizes.

Its modular range of applications driven by its patented meaning based technology allow any organisation to implement and develop effective Intelligence based projects guaranteeing that all key information is identified and available to the right people at the right time.

Founded in 1999, the company is present in France (Paris, Montpellier), the United Kingdom (Cambridge), Switzerland and Canada. Organisations currently using AMI include Suez, LVMH, UNESCO, Faurecia, Air France, Postcomm, the Ministry of Defence, the Ministry of Economy and Finances and the Ministry of the Interior.
