

Extending the information perimeter

For Immediate Release:

AMI Software announces the availability of its 64-bit version software on Bull NovaScale® servers

Paris - May 29, 2006 - AMI Software specialising in the development of software to access and capitalise on the value of online information to enhance organisational decision making processes announces the availability of the 64-bit version of its software AMI Enterprise Intelligence on Bull NovaScale® servers.

AMI products are specifically designed for information search and knowledge capitalisation. The relentless development of information sources across both internal and external networks continues to increase the volume of data available to organisations and decision makers. To deal effectively with this ever evolving phenomenon AMI took the decision early on to develop the modular architecture of its products to take full advantage of the power offered by the new generation of 64-bit servers.

Eric Fourboul, AMI's Chief Technical Officer said "the new analysis and charting tools in AMI Enterprise Intelligence benefit enormously from increased computing power. The ability to be able to profit fully from the increased capabilities offered by Bull NovaScale servers was key for us. We can only congratulate Bull on the quality of support, attention to detail and time commitment they have offered us in this operation".

The availability of "AMI Enterprise Intelligence 64" broadens the scope of Bull's business intelligence offerings. Frederic Lacombe, Director of Emerging Markets at Bull" said "AMI is one of the few solutions on the market that delivers all of the essential operations of research, automating the processes of data collection and dynamic analysis with the means by which to also manage the distribution of relevant information to the right people at the right time. AMI can index very large volumes of data and guarantees high levels of performance".

About AMI Software – AMI Software is a software development company specialising in the design and marketing of software solutions that allow companies and organisations of all sizes to increase and develop their information resource. AMI's objective is to be one of the leading developers in this market and concentrates all its efforts and investments in this area. Founded in 1999, the company has operations in France (Paris, Montpellier), the United Kingdom (Cambridge), Switzerland through its partnership with MEGAGroup Consulting (Geneva, Neuchâtel) and Canada through its partnership with Propélion (Montreal).

AMI solutions are currently used on a daily basis by many organisations including UNESCO, Air France, Casino Group, the Ministry for the Economy and Finances, the French Ministry for Defence, Valeo and Nespresso.
